

TYPE Fluxcored hardfacing welding wire based on high Carbon, Chrome and Niobium

APPLICATIONS Cladding and rebuilding parts that are subject to severe abrasion.

PROPERTIES Extreme abrasion resistant with reasonable impact properties and temperature resistance up to

300°C. Due to the combination Cr and Nb carbides the deposit structure contains very fine particles that results in excellent wear resistance against heavy abrasion. Usualy the maximum number of layers is 2 till 3 but when using a special stringer build up technick with release cracks, upto 15

layers is also possible.

CLASSIFICATION EN ISO 14700: T Fe15

DIN 8555: MF 10-GF-60-G

SUITABLE FOR Sand and earth moving equipment such as buckets and teeth, dredge buckets, coke hammers,

crushing equipment, rockwool rolls and brick industry, cement rollers, tables, Nihard and Mohard

parts without buffer layer, slurry pumps, loaders, wear plates etc.

Equivalent in SMAW: CEWELD® Dur 62S, Dur 63Nb
